SUMMARY

M.Tech student at IIT Hyderabad with 2+ years of research experience in Artificial Intelligence and Machine Learning, specializing in Computer Vision, OCR-based text and character recognition, Vision-Language Models, and multimodal text-image understanding. Experienced in image preprocessing, dataset annotation, model benchmarking, and performance evaluation across challenging imaging conditions, along with hybrid semantic and keyword retrieval for matching extracted text against reference data.

WORK EXPERIENCE

Project Associate | LFOVIA Lab, IIT Hyderabad Sep 2024 – Jul 2025

Evaluated and fine-tuned Vision-Language Models (VLMs), including Florence-2 Base/Large, Llama 3.2 Vision, and Qwen2-VL, for multimodal text-image understanding and OCR-based text and character recognition, and benchmarked task-specific models including RetinaFace, DeepFace, and Siamese architectures for targeted detection, face analysis, and visual tracking/re-identification.

Junior Research Assistant | TIHAN, IIT Hyderabad: Nov 2023 – Jul 2024

Worked on multimodal maritime perception by developing and curating near-infrared and sonar datasets, implementing sensor-specific preprocessing, annotation, data-quality optimization, and model-training pipelines for robust object detection in complex maritime environments, resulting in an IEEE conference publication.

Research Intern | WINET Lab, IIT Hyderabad: Jul 2023 – Nov 2023

Developed foundational sonar-based underwater object-detection datasets by implementing annotation, Python-based preprocessing, data augmentation, and markup pipelines to improve data quality and model robustness, with the work published at the IEEE International Conference on Sustainable Technology and Engineering (i-COSTE 2023).

PROJECTS

Vision-Language Model Evaluation for Computer Vision and OCR Tasks (LFOVIA Lab, IIT Hyderabad):

- Evaluated Vision-Language Models (VLMs) for multimodal (text-image) understanding across computer vision tasks, including OCR-based text and character recognition, object detection, segmentation, age and gender classification, crowd analysis, and action/activity recognition, as alternatives to conventional task-specific models.
- Curated and annotated RGB and depth-mapping datasets, building structured preprocessing, labeling, and quality-validation pipelines that standardized inputs and improved model training consistency and reliability.
- Benchmarked and fine-tuned models using Python-based pipelines, evaluating detection and recognition performance (precision/recall, IoU) and optimizing data-processing workflows for improved scalability and computational efficiency.

Multi-Channel Conversational AI Platform (IIT Hyderabad Build Program):

- Built a multi-tenant conversational AI platform unifying voice, chat, and email with real-time STT/TTS pipelines and multilingual support.
- Developed a hybrid retrieval pipeline (semantic + keyword) that matches noisy, inconsistently phrased text queries against a reference knowledge base, with LLM-based intent classification, improving answer relevance by 18%.

THESIS PROJECT

Machine Learning for Non-Oxidative Methane Coupling in a DBD Reactor

- Developed and benchmarked Linear Regression, Random Forest, XGBoost, and Gaussian Process Regression models to predict reactor performance from operating conditions, validated with Leave-One-Out Cross-Validation (LOOCV), reaching cross-validated R^2 up to 0.996 across six reactor-performance outputs, and identified Bayesian Optimization for experiment-guided process optimization.
- Recently adapted the RRSI method to this work to rigorously verify that model improvements are real.

TECHNICAL SKILLS

Programming & Tools: Python, C++, SQL, PyTorch, TensorFlow, OpenCV, CUDA, NumPy, Pandas, Scikit-learn

Computer Vision & OCR: OCR (Text and Character Recognition), Image Preprocessing, Object Detection, Data Augmentation, Dataset Annotation, CNN, YOLO, DeepFace, RetinaFace

Multimodal AI & LLMs: Vision-Language Models (Florence-2, Qwen2-VL, Llama 3.2 Vision), Transformer Architectures, Large Language Models (LLMs), LLM Fine-Tuning, RAG, Hybrid Semantic + Keyword Retrieval

Model Evaluation: Precision, Recall, IoU, Model Benchmarking
